## Health & Fitness Update

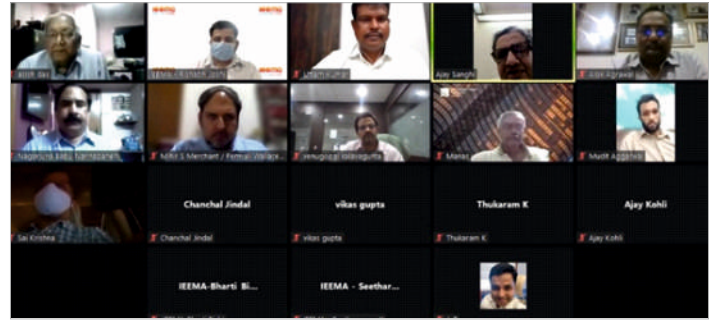

## Meeting of Surge Arresters Division

**13th September 2021:** A special meeting was called by the Surge Arresters division to discuss the technical webinar series being planned by the division. Six Members from 6 organisations attended this meeting. Members discussed the subjects of the webinars and finalised the dates. The tutorial series will be held from 24th November to 15th December 2021.

## Meeting of Testing, Measurement and Monitoring Solutions Division

**14th September 2021:** The meeting of Testing, Measurement & Monitoring Solutions Division was held through the web. The major points discussed during the meeting were ambiguous approval processes in utilities for T&M equipment, the need for mandatory Pre-bid demonstrations for tender technical evaluation, acceptance of certificates of internationally recognized labs and barriers in adoptions of new technologies in the test and measurement industry. 24 representatives attended the meeting.

## Meeting of Distribution Transformer Division

**15th September 2021:** IEEMA Distribution Transformer Division meeting was held over web. The meeting was chaired by Mr. Ajay Sanghi, Chairman, IEEMA-Distribution Transformer Division. The meeting was attended by 40 members, the important points discussed during the meeting were: confirmation on costing of revised PV formula of Distribution Transformer and discussion on CRGO price calculation, proposal to discontinue old PV formula for non-BIS/non-BEE Distribution Transformers, State of Industry and Industry size estimation of DT industry for FY20-21, discussion on TRAFOTECH-DT/Technical webinars from DT Division.

The next meeting will be convened in the last week of October 2021.

# “Keep your Eyes HEALTHY”

### Use proper lighting

Reduce interior lighting by using fewer light bulbs lower intensity bulbs and tubes. Reduce exterior light by closing window shades or blinds. Avoid working under bright fluorescent lights. Use a table lamp that provides softer, indirect lighting.

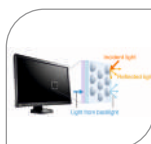

### Reduce glare

Glare from light reflecting back from your screen or other surfaces in the room can contribute to computer eye strain. Install an anti-glare screen protector. If you wear glasses, wear lenses with anti-reflective (AR) coating.

### Upgrade your display

Adjust the brightness of the screen to a comfortable level same as the brightness of your surroundings.

### Blink frequently

Blink frequently to re-moisten the surface of your eyes and avoid dry eye symptoms.

In order to reduce your risk of dry eyes during computer use, train yourself to blink after reading every two or three paragraphs on your screen.

### Use computer glasses

Computer glasses can be very helpful as they reduce your exposure to potentially harmful blue light emitted by digital devices.
